

DIALINDEX®

ONTAP® DIALINDEX® (File 290)

FILE DESCRIPTION

DIALINDEX®, File 411, is the online master index to DIALOG databases (excluding menu-driven files and gateways). It is designed to assist users in identifying the DIALOG databases that contain information on a given subject. Search topics can be tested in a group of files of the user's choosing or in one or more database categories provided by DIALOG. Using a single **SELECT** statement of up to 240 characters to describe the search topic, a user can easily determine which databases are the best candidates for a search on the desired topic.

File 290, **ONTAP DIALINDEX**, offers users an opportunity to practice database selection using the **ONTAP** files. See page 411-4 of this Bluesheet for a list of the **ONTAP** categories.

DATABASE CATEGORIES

To maximize the value of using **DIALINDEX**, and also **OneSearch®**, **DIALOG** databases have been grouped into categories by subject. Each category is assigned an acronym for use in searching that file group; for example, the Market Research category has the acronym **MKTRES**. Supercategories, which are groups of categories such as **ALLBUSINESS**, can be searched only in **DIALINDEX**.

An index to Categories and Supercategories is available at <http://library.dialog.com/bluesheets/>. A hierarchical presentation (without acronyms) is available at <http://www.dialogweb.com>.

A complete list of databases included in each category may be found online on Dialog by entering **HELP** and the eight characters of a category's acronym.

DIALINDEX COMMANDS

SET FILES/SHOW FILES. After **BEGINning** in **DIALINDEX** (**B 411**), specify the list of files to be searched with the **SET FILES** (abbreviated **SF**) command. The file list can consist of file numbers, one or more category acronyms, or a combination, e.g., **SF 16,POLLUT**. Databases may be eliminated from a category using **NOT**, e.g., **SF MKTRES NOT 570**. To see the file banners for the file list specified with **SET FILES**, enter the command **SHOW FILES**.

SELECT. All of the features of the **SELECT** command can

be used, but no sets are created in **DIALINDEX**. To apply the same **SELECT** command to a new **SET FILES** list, simply enter **S** alone.

EXPAND. The **EXPAND** command may be used to view the indexes of up to 100 files, but **EXPAND** entries cannot be **SELECTed** in **DIALINDEX**.

SAVE TEMP. The **SAVE TEMP** command may be used in **DIALINDEX** to save the **SELECT** command for additional searching in actual **DIALOG** files. Be sure to save the strategy before using **RANK FILES**.

RANK FILES. **DIALINDEX** output displays in file number order. To rank results in order by the number of items retrieved from each file, enter the **RANK FILES** (abbreviated **RF**) command. The resulting display includes **N**-reference numbers which can be used instead of file numbers to begin a search in the desired files, e.g., **BEGIN N1-N5,N9**.

TIPS

USE FILE 411

to quickly and easily identify files that contain information on a given subject.

USE SAVE TEMP

to save a **SELECT** statement after using it in **DIALINDEX**.

USE BEGIN HITS

to begin a search directly in all files having **DIALINDEX** results. Then use **EXS** to re-run your saved searched.

DIALOG FILE DATA

Inclusive Dates: Revised November 1998 (File 411)

Update Frequency: Irregular (File 411)

Undefined (File 290)
