

Current Contents Search®

FILE DESCRIPTION

Current Contents Search® is the online version of Thomson Scientific's popular *Current Contents®* series of publications. *Current Contents* is a weekly service that reproduces the tables of contents from current issues of leading journals in the sciences, social sciences, and arts and humanities. Current Contents Search consists of seven subsets based on Current Contents editions: **Clinical Medicine* (SF=CC CLIN); **Life Sciences* (SF=CC LIFE); **Engineering, Technology and Applied Sciences* (SF=CC ENGI); **Agriculture, Biology and Environmental Sciences* (SF=CC AGRI); **Physical, Chemical and Earth Sciences* (SF=CC PHYS); **Social and Behavioral Sciences* (SF=CC SOCS); and *Arts and Humanities* (SF=CC ARTS).

In addition to providing access to the tables of contents of the journals covered, Current Contents Search also provides a complete bibliographic record for each item. These items include articles, reviews, letters, notes, and editorials. The items indexed in Current Contents Search also appear in one or more of the other Thomson Scientific databases on DIALOG, where the records include a listing of cited references: Scisearch®, Files 34 & 434; Social Scisearch®, File 7; and Arts & Humanities Search®, File 439.

Author keywords and KeyWords Plus™ are searchable as part of the Basic Index for records from January 1991 forward. In addition, about 75% of the records from the five science CC SEARCH editions asterisked in the list above contain author abstracts from 1991 forward.

SOURCES

Current Contents Search covers approximately 6,500 journals representing virtually every discipline within the sciences, social sciences, arts, and humanities.

TIPS

USE FILE 440

to find tables of contents for leading journals in the sciences, social sciences, and arts and humanities.

USE SF=

to restrict retrieval to records from a particular subfile.

USE /CONT

to restrict retrieval to Table of Contents records.

DIALOG FILE DATA

Inclusive Dates: January 1990 to the present

Update Frequency:

Daily (Approximately 4,000 records per update)

File Size:

More than 18M records as of December 2007

CONTACT

Current Contents Search is produced by Thomson Scientific. Questions concerning file content should be directed to:

/AB Abstract: The effect of various dietary fiber sources on glycosylated
 hemoglobin and renal hypertrophy, two long-term indicators of
 blood glucose control, was studied in diabetic rats. Streptozotocin-treated rats were fed a fiber-free diet or diets
 containing 8% dietary fiber, using one of the following fiber
 sources: cellulose, sugar beet fiber, beet fiber treated with
 beet fiber treated with calcium carbonate, oat bran, rye bran,
 barley bran flour, wheat bran, or guar gum. After 28
 days, only guar gum-feeding reduced the % glycosylated
 hemoglobin relative to the fiber-free control group.
 Renal hypertrophy was seen in animals from all diabetic
 groups and was not diminished by any of the fiber sources.
 sources. In meal-fed animals there was no evidence of
 expansion of the intestinal contents volume by feeding of any
 fiber sources. Guar gum substantially increased the viscosity
 of the intestinal contents in 3 of 4 animals. The results
 are consistent with the use of purified, highly viscous
 fiber sources for improving glycemic control in
 insulin-dependent diabetes.
