

Macon Telegraph

FILE DESCRIPTION

The *Macon Telegraph* covers central Georgia to South Carolina. Primary areas of coverage include farming and related industries (TriState Dairy, Cagle Inc. (chicken processing), and Georgia Farm Bureau Medical Insurance Company) and recreational sports. Given that Georgia is home to 38 state parks, the *Macon Telegraph* provides insights into environmental and rural development issues (see articles by Oby Brown and Bill Weaver). Recreational sports, especially bicycling, fishing, and lakeside activities, are well covered. Regular sections include business, local, state, Georgia living, and sports news, among others.

SUBJECT COVERAGE

- Arts & Entertainment
- Business
- Columns
- Editorials
- Features
- Full Text News Stories
- Leisure
- Letters to the Editor
- Sports
- Wire Stories

TEXT:
We humans are taking a giant step this week in our quest for signs of life beyond Earth.

Two-and-a-half hours before the sun rises on Mars on Friday, (about 1 p.m. EDT), an American rocket ship swathed in 16 balloons is to land with a series of humongous bounces in a rock-strewn flood-plain near the Martian equator.

After rolling to rest, the spaceship Pathfinder, will open like the petals of a flower to let a little roving robot, tagged Sojourner, trundle down a ramp and start exploring the ruddy surface of the Red Planet an object of awe and speculation since the dawn of mankind.

"This is a new way of landing a spacecraft on a planet," said Brian Muirhead, flight systems manager at NASA's Jet Propulsion Laboratory in Pasadena, Calif. "Frankly, we'll be very surprised if everything goes just right."

If it does, about four hours after landing, Pathfinder will pop up an antenna and radio back the first closeup pictures of Mars since the Viking landings 21 years ago. Live television pictures are expected that evening and daily through the first week of the mission.

(...)

Instead, Pathfinder and its 23-pound roving sidekick will check out what scientists believe is a likely site for finding rocks like the 4 billion-year-old Martian meteorite that was picked up in Antarctica in 1984. Last August, after years of intense study, some researchers claimed the meteorite contained what looked like ancient fossils of microorganisms, resembling the strange bacteria recently found at the bottom of the ocean and deep underground on Earth.

Other scientists dispute the meteorite evidence, however. A definitive answer probably must wait until a future spacecraft brings back Martian samples to study in terrestrial laboratories a mission planned for 2005.

Pathfinder's landing site, Ares Vallis, was chosen because it contains a treasure trove of rocks washed down from the Martian highlands during what scientists believe was a catastrophic flood more than 3 billion years ago.
