

Bradenton Herald

FILE DESCRIPTION

The *Bradenton Herald* brings you more Florida news (enter B PAPERSFL to search together all eight of our newspapers from Florida). The paper covers South Florida, an area dominated by the tourist industry, as well as manufacturing operations--from telecommunications to beverages. You can read accounts of the activities of companies such as Tropicana Dole Beverages, the largest manufacturing employer in the area; two leading boat manufacturers, Wellcraft Marine and Chris Craft; as well as technology companies, including Eaton Corp., a Fortune 1000 aerospace company; Teltronics for telecommunications equipment; Hi-Stat Manufacturing, producers of temperature and speed sensors; and Superior Electronics, manufacturers of electronics components. The area is also rich in educational establishments, with nine local colleges and universities, including Stetson University College of Law, the University of Tampa, and the University of South Florida--all of which are well represented in the *Herald*.

 MARS METEORITE SHOWS SIGNS OF LIFE
 Associated Press
 Bradenton Herald, Final ED, P F1
 Wednesday, August 7, 1996

 Word Count: 368

DL=, /LP, /TX
 TEXT:
 WASHINGTON - Researchers testing a meteorite from Mars claim to have found evidence that primitive life once lived on the red planet. Other scientists, however, scoffed Tuesday and said stronger evidence is needed.

Scientists from NASA and three universities report in a paper to be published next week that chemical and microscopic tests of a rock from Mars detected organic compounds deposited in such a way that they could have come only from biological activity.

/TX
 They also report seeing shapes that "resemble some forms of fossilized filamentous bacteria," although much smaller.

When studying these factors, the researchers report, "we conclude that they are evidence for primitive life on early Mars."

Carl Sagan, a leading authority on the search for extraterrestrial life, called the findings "evocative and very exciting." But he said the chemical compounds reported in the paper "are not evidence of life."

"I want everybody to understand that we are not talking about little green men here," said Daniel Goldin, the administrator of the National Aeronautics and Space Administration. He called the findings "exciting, even compelling, but not conclusive."

Other scientists said that the organic compounds found by the researchers could have been formed without life and one stated flatly: "I don't believe it."

The study is to be published next week in the journal Science. Draft copies were released by the journal Tuesday after the contents were leaked.

Past or present existence of life on Mars has been considered a possibility ever since studies by spacecraft landers showed that water was once present on the planet surface.

None of the Martian landers, however, found evidence that life now exists on Mars, nor did the robot craft find chemical markers for life in limited soil samples that have been analyzed.

The researchers say in the paper that a rock from space recovered in Antarctica contains organic compounds that could only have been deposited by biological activity.

The new findings center on a meteorite called Allan Hills 84001, the oldest of 12 pieces of rock that earlier studies confirmed as originating from Mars. It is thought the rocks were jolted away from Mars by some massive collision in ancient times and then drifted in space until they fell to Earth.
